

Automatic Door Division

Central to the aesthetic design and accessibility of any building is the entrance. Structura brings its expertise in curtain wall engineering to work alongside architects, designers, developers and builders to provide 'total entrance solutions' where the design integrity of the building's appearance must be preserved whilst conforming to the highest standards of safety and accessibility.

With ever increasing numbers of drive and door system products available Structura seek to combine the latest in innovative and technically advanced solutions with the project management and technical skills of dedicated consultants.

The use of automatic doors to enable people with disabilities equal and easy access is in accord with the principles of good practice that underpin The Disability Discrimination Act with regard to entrances.

As far as possible disabled customers should have access in just the same way as others who are not.

Bull Ring Shopping Centre, Birmingham
Automatic Entrance Doors within Planar Screen

101 St Martins Lane
